

AURORA

UI / UX Design Reference

Professional macOS lighting control: dense and powerful while programming, calm and unmistakable while performing.

BUILD MODE | PERFORM MODE | SETTINGS | WEB / IPAD

Visual north star and implementation companion to Aurora_UI_UX_Implementation_Plan.md

01 - Approved North-Star Direction

This render establishes the overall mood, density, hierarchy, and Aurora identity. It is visual intent, not a pixel-perfect implementation contract.

Key ideas: charcoal surfaces, restrained Aurora accent, fixture browser left, central programmer, contextual inspector, visual palettes/presets, cue/song information, and quiet health chrome.

02 - Build Workspace

Default programming workspace. Panels remain reusable and should eventually support saved/dockable layouts.

AURORA • Haywire Summer 2027

Movers

PROGRAMMER Intensity Color Position Beam Gobo Selected: Back Wash 82% ■ Pan 48° / Tilt 32°

High-level fixture semantics first. Raw DMX belongs in technical views.

INSPECTOR Contextual properties

Fixture / Group / Cue Palette /

Preset Timing / Metadata

PALETTE / PRESET SHELF [Warm Amber] [Deep Blue] [Open White] [Drummer] [Center] [Wide Fan]

CUES / SONG / EFFECTS / MONITOR ■ 14.0 Chorus 15.0 Solo 16.0 Blackout

03 - Programmer + Visual Palettes

The Programmer is the creative center. Recognize visual content before reading labels.

Palette tiles are presentations of first-class model objects. Applying a palette must preserve Aurora's existing reference semantics.

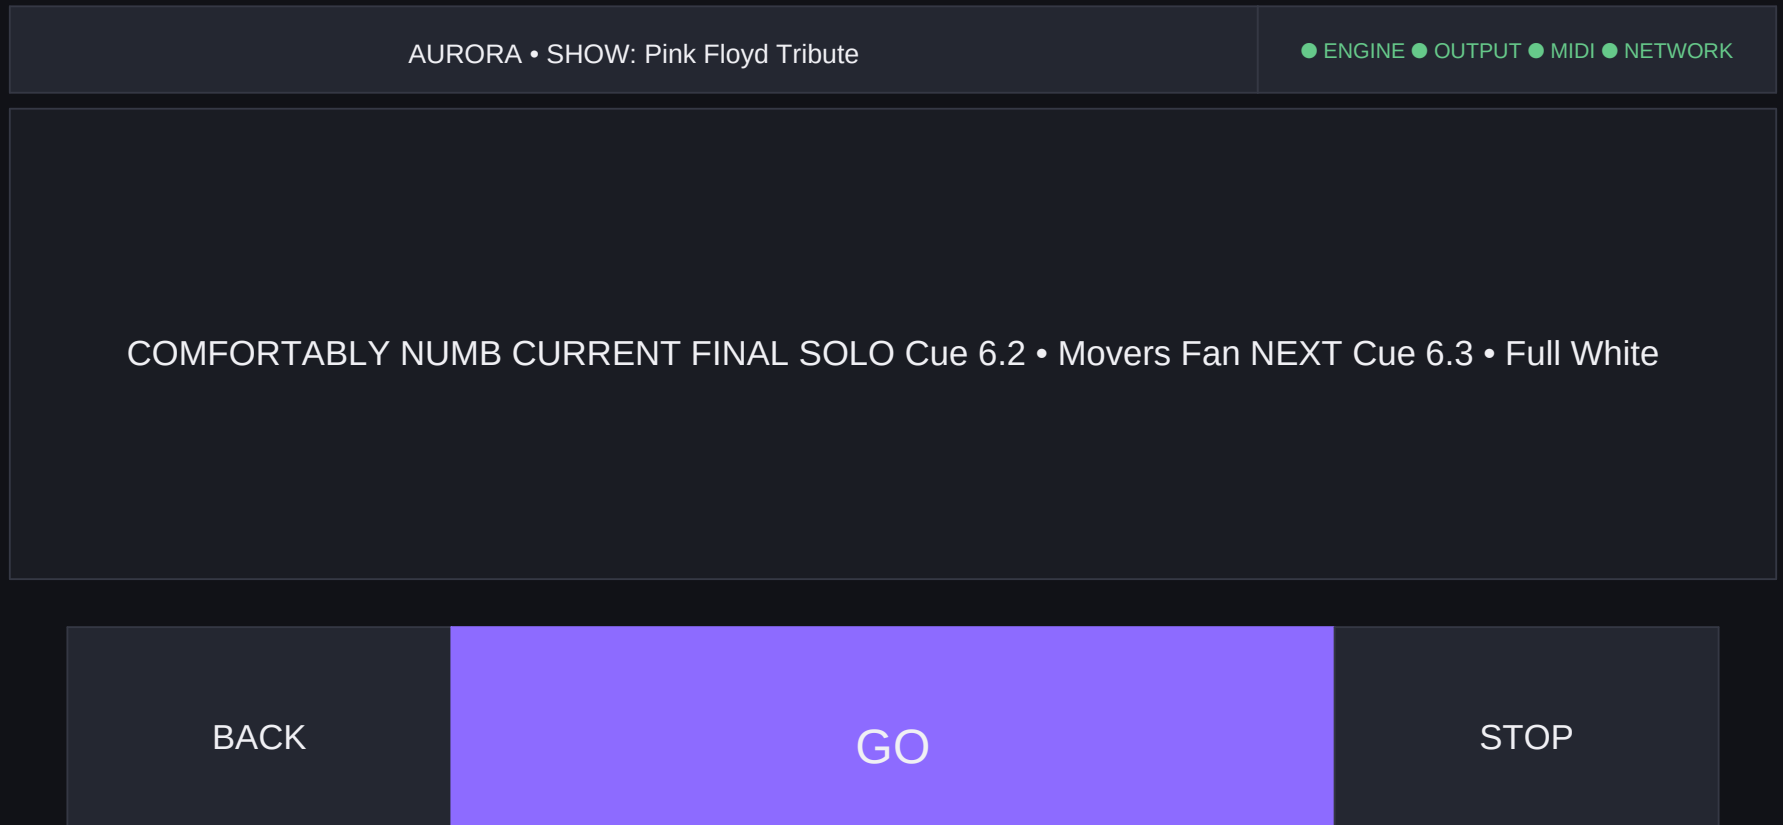

04 - Song Mode

Musician-oriented organization over the existing cue/playback engine. Manual progression only until automatic completion semantics exist.

SET LIST Money for Nothing Comfortably Numb Summer of '69 Shook Me All Night Long	COMFORTABLY NUMB Pink Floyd INTRO 1.0 Blue Atmosphere VERSE 1 2.0 Dim Blue Wash CHORUS 3.0 Open White + Backlight SOLO 1 4.0 Movers → Center 4.1 Slow Sweep FINAL SOLO 6.0 Full Stage 6.1 Movers Fan 6.2 Audience Sweep 6.3 Full White	SONG INSPECTOR Artist Notes Annotations Entry target Manual progression Current / next target health
--	---	---

05 - Perform Mode

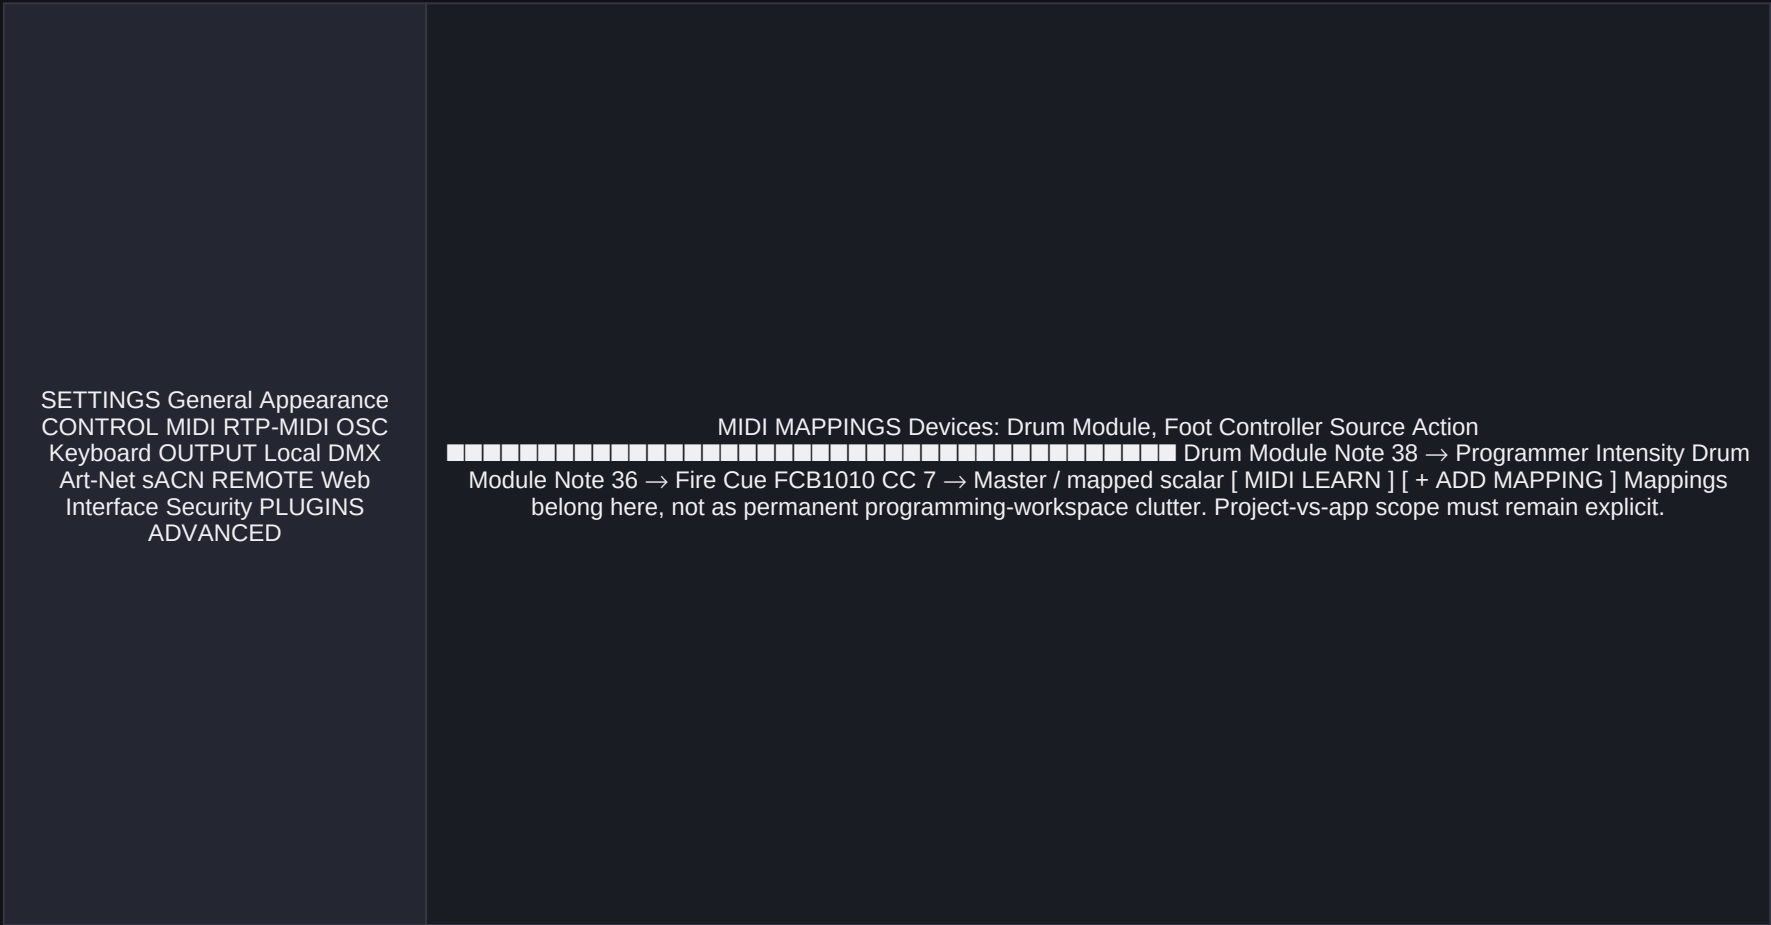

A stage cockpit, not an editor. Readable from distance, touch-friendly, and hard to alter accidentally.

Warnings escalate visually but should not cover GO. Perform Mode consumes throttled PerformanceSnapshot state, not high-rate DMX buffers.

06 - Settings: Complexity Tucked Away

Occasional configuration should not colonize the main workspace. MIDI mappings are a first-class example.

07 - Web / iPad Remote

Same performance semantics as the Mac, adapted for touch. No second lighting engine.

AURORA REMOTE COMFORTABLY NUMB
CURRENT Solo 1 Cue 4.1 Slow Sweep NEXT Verse
2 Cue 5.0 GO BACK STOP ● ENGINE ● OUTPUT
● MIDI

REMOTE DESIGN RULES • Large touch targets • Current / next dominates •
Connection state always visible • Minimal approved overrides • No
patch/programmer clone • Same PerformanceSnapshot semantics • Never block
transport with incidental dialogs • Web/iPad ≈ Perform Mode

08 - UI Implementation Roadmap

Do not ask Grok to redesign everything at once. Establish the visual language, review it, then spread it deliberately.

Phase	Area	Goal
UI-01	Design system	Tokens, components, previews. STOP for visual review.
UI-02	Application shell	Toolbar, health chrome, workspace container, Build/Perform.
UI-03	Browser + Programmer	First complete creative workflow.
UI-04	Palettes / Presets	Visual reusable-object workflow.
UI-05	Cue workflow	Cue list, inspector, record/update.
UI-06	Song Mode	Musician-oriented organization.
UI-07	Perform Mode	Mac stage cockpit.
UI-08	Settings	MIDI/network/output/plugins tucked away.
UI-09	Patch / Output / Diagnostics	Technical workspaces.
UI-10	Web remote	Touch performance surface.
UI-11	Docking / layouts	Professional workspace polish.
UI-12	Product polish	Icon, splash, accessibility, consistency, profiling.

First Grok task: implement UI-01 only, then stop for review. The design system must be approved before it spreads across Aurora.
